

Asuni CAD Releases ARQ Landscape 3 for AutoCAD

Asuni CAD presents its latest application: ARQ Landscape 3, the most complete tool for landscape design aimed at landscaping, urban planning, and gardening professionals, urbanism and environmental councils for local entities, etc.

ARQ Landscape 3 is a specific tool to design and project green areas. It constitutes an evolved application which incorporates the features required to develop a landscaping project in all its phases within an AutoCAD: from the technical 2D plane, to generating real images and virtual tours throughout the design.

The software includes the necessary tools to easily create 3D plans and models for parks, gardens, public squares, golf courses, building common areas, etc. Working with specific tools allows saving time in the project development and simplifies processes that require a huge time investment.

The main tools include a wide database with plant attributes, tools to generate and edit terrains, 2D and 3D vegetal species libraries, structural elements (fences, paths, stairs, etc.), a system to define technical documentation, data sheets exportable to Excel format, a new watering system, libraries with urban equipment, a new rendering module, and so on.

ARQ Landscape 3 runs on AutoCAD versions 2002 to 2008, AutoCAD Architecture, and AutoCAD MAP.

About Asuni CAD

Asuni CAD is a company specialized in software development for AutoCAD with more than 15 years experience in developing software for architecture, engineering or landscaping. They have developed programs such as Penguin, ModelCAD, Bubble, VisualARQ, LT Express, and Pipe 2D.
